A dedicated and innovative Computer Science student currently pursuing graduate program at The Hong Kong Polytechnic University. With a strong foundation in programming and software development, and a keen interest in problem-solving and technological advancements.

Alongside my technical skills, I have a passion for design, which enhances my ability to create intuitive and visually appealing user experiences. My proficiency in both coding and design allows me to bridge the gap between functionality and aesthetics, making me a versatile and valuable asset to any team.

Education

The Hong Kong Polytechnic University, B.Sc. (Hons) in Computer Science, Minor in Information Security
(graduating year:2027)

Experience

- **AI and Software Engineering Intern at AI and Software Engineering Intern** at TechPup Limited , Visual Earth, Hong Kong Science and Technology Park (1 September 2025 - November 2025):
 - Conducted in-depth UI/UX research to identify optimal design patterns for the app, ensuring user-centric and accessible interface decisions.
 - Implemented the front-end architecture of the mobile/web application using React API enabling seamless interaction with the smart dog vest's health data.
 - Acted as the primary liaison between the CEO and design team, translating business goals and visual concepts into functional UI components.
 - Collaborated closely with the designer to iterate on wireframes and prototypes, aligning aesthetics with usability and technical feasibility.
 - Delivered a responsive, intuitive user interface that enhanced user engagement and supported real-time monitoring features.
- **Event assistant** at The Hong Kong Polytechnic University Student Affairs Office (20 August 2025 - 6 October 2025):
 - Managed registration processes and maintained accurate attendee records using digital tools and spreadsheets.
 - Provided front-line support during events, handling inquiries and resolving issues to enhance participant experience

Relevant Skills

- | | | |
|------------------|-----------------------------------|---------------------------|
| • Java | • Object Oriented Programming | • Graphic Design |
| • Python | • DatabaseManagement System(DBMS) | • Digital Illustration |
| • C++ | • Linux / Unix | • Traditional Art |
| • R | • JavaScript | • Canva |
| • SQL | • React API | • Social Media Management |
| • Data Analytics | • C# | |

Projects

- **Binary Classification of Imbalanced Data:**

Explored NN (Neural Network) and SVM for binary classification on the Pima Indians Diabetes dataset using the **KNIME Analytics Platform**. Designed a feedforward NN tailored for imbalanced data, compared model performance across various factors, and validated classifier effectiveness through experimentation.

- **Synchronized Bank Account Operations:**

Implemented synchronized methods for deposit and withdraw operations on a shared bank account in Java, utilizing wait, notify, and notifyAll to ensure thread safety and successful test execution.

- **Multithreaded Web server Development:**

Built a high-performance web server using **Python socket programming**, enabling efficient handling of concurrent HTTP requests. Designed a logging system for client interactions, optimized threading (or asyncio) for responsiveness, and ensured compliance with HTTP protocol standards to improve reliability and scalability.

- **Virtual File Management System:**

Developed the Comp VFS (CVFS) project in **Java**, simulating a file system entirely in memory for fast, efficient file operations, including virtual disk management, directory and file handling, advanced search functionalities, and disk state persistence.

- **Banquet Management System:**

Developed the Banquet Management System (BMS), a **full-stack application** enhancing banquet planning efficiency and user experience. Built with **Gradle, Java, Oracle, REST API, and React**, it manages banquet details, attendee registration, and generates reports through an Admin and User Portal. The architecture flows from

Frontend → Server → Controller → Main → DAO → SQLConnection → Database.

Achievements

- **Finalist at Cathay Hackathon 2025:** Top 5 finalist teams at the Cathay Hackathon 2025, out of more than 2,000 participants.

My team designed an interactive internal dashboard that automates and simplifies the quotation process. By leveraging formulas and simulated data, it intelligently accounts for external cost factors and generates ready-to-use quotations including both air-freighter and trucking costs. The platform is intuitive enough for users without prior training, enabling faster and more informed decisions.

Roles and activities

- **PolyU Non-Local Student Services (NLSS) I-Peer 2024-2026: Mentored and guided 12 incoming students,** assisted with hall check-in providing **logistical support** and a welcoming environment, organized and facilitated events to foster community building and cultural integration, and served as a key resource for new students, offering advice and support for academic and social adjustment.
 - **PolyU English Language Centre (ELC) English Drama Club Design Lead, Props and Backstage Manager, and Promotion Team member 2024-2025:** Designed promotional materials, including Instagram posts, club t-shirts, and tote bags distributed to members. Led club promotion through physical booths and social media, enhancing engagement and visibility. Managed a backstage team of 15 members, overseeing stage design and props organization for performances. Coordinated rehearsals with 13 actors, ensuring seamless transitions and backstage support
 - **PolyU Student Affairs Office (SAO) South Asian Society (SAS) Design and Social Media Lead 2025-2026:** Currently leading visual branding and digital engagement for the South Asian Society at The Hong Kong Polytechnic University. Responsible for designing promotional assets, curating content, and managing social media platforms to enhance outreach and cultural representation. Actively contributing to increased event visibility and community engagement through strategic design and storytelling.
 - **PolyU Google Developer's Group (GDG) Social Media Lead and Assistant Technical Lead 2025-2026:** Oversee social media strategy and technical support for the Google Developer's Group of Concern (GDG) at The Hong Kong Polytechnic University. As Social Media Lead, manage content creation, scheduling, and platform analytics to boost engagement and visibility. As Assistant Technical Lead, support digital infrastructure, troubleshoot technical issues, and assist in organizing virtual events and workshops. Collaborate closely with design and outreach teams to ensure cohesive communication and smooth execution of initiative.
